

# Micro Logistics Hubs

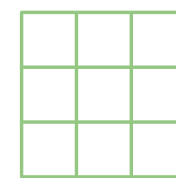

## Do I have the right space for a micro logistics hub?

### Location

Needs to be near major roads for easy vehicle access. Ideally not near a one-way system. Central location preferable.

### Space

Floor space between 90-185m<sup>2</sup> (1000-2000ft<sup>2</sup>) is ideal. These could be spaces such as railway arches or underused car parks.

### Access

Height of 2m+ needed. Access necessary over 14-hour period from 6.00 onwards.

### Contract

Shorter, more flexible contracts with a break clause preferred.

### Other Information

Electric vehicle charging points may be necessary depending on vehicles in use.

### Security

CCTV required to protect goods, assets and staff. In shared locations, individual secure spaces are required.
