

10 TIPS TO HELP YOUR BUSINESS IMPROVE AIR QUALITY

AIR QUALITY IS A SERIOUS HEALTH AND ENVIRONMENTAL ISSUE. TAKE THE 10 ACTION CHALLENGE TO REDUCE YOUR IMPACT ON AIR QUALITY AS A BUSINESS.

CONSOLIDATE DELIVERIES

Talk to your business neighbours and see if you have the same suppliers (or supply needs) and work together to consolidate your delivery days and times.

ENCOURAGE STAFF TO WALK OR CYCLE TO WORK

USE CLICK + COLLECT FOR ONE-OFF DELIVERIES

For one-off or personal deliveries to your workplace, consider making [click.collect](#) a company policy.

Offering a [cycle-to-work scheme](#) is one great way to promote active travel to your workplace, but walking can be just as rewarding. Explore the [CRP Clean Air Route Finder](#) to find the least polluted path from work or home. To help encourage cyclists, make sure to offer storage space for cycles and gear.

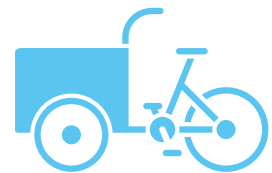

ASSESS YOUR INDOOR AIR QUALITY

Your employees are spending most of their time indoors, it is important to make sure the air they breath is clean and healthy, too!

REDUCE YOUR SUPPLY CHAIN EMISSIONS

Business deliveries are essential, but why not choose a supplier or service provider that's committed to zero or low emission delivery methods - think cargo bikes and electric vehicles! Check out the [CRP Clean Air Villages Directory](#) for ultra low emission suppliers near you!

CONSOLIDATE YOUR WASTE AND PICK A GREEN PROVIDER

Talk to your business neighbours to see if you can coordinate pick up dates, materials and locations. Expand your recycling beyond the paper, glass and aluminium. For example, [First Mile's](#) smart and sustainable recycling offers zero-to-landfill recycling, where un-recyclables are sent to generate green energy.

HOST AN AIR QUALITY AWARENESS EVENT

Raising awareness and educating your employees - or clients - on air quality issues and interventions, can help increase your reach, gain buy-in from staff and prompt others to take action to improve air quality.

CHECK YOUR FLEET IS ULEZ READY!

The Ultra Low Emission Zone (ULEZ) is expanding 25th October, 2021. Make sure your company vehicles are ready to minimise fees and tariffs. Check [here](#) for more info on EV switching!

CHECK YOUR BUILDING'S ENERGY EFFICIENCY

In order to heat, cool and light your office, energy is needed, and its generation can contribute to poor air quality. Check your building's energy efficiency and [switch to a green provider](#) if you haven't yet!

INCORPORATE AIR QUALITY INTERVENTIONS INTO YOUR BUSINESS PLAN

For truly sustainable, long-term solutions to air quality, they need to be built into your business and CSR plans.
