

Want to know if an **Electric Vehicle** is suitable for your business?

We can help!

Interested in getting an electric vehicle (EV), but aren't sure which one may suit your needs? We're here to help you start your EV journey!

As part of the Clean Air Villages 4 project, Cross River Partnership (CRP) is providing businesses with an opportunity to monitor and assess their fleet for EV suitability - for free!

Complete our short Electric Vehicle Survey and we'll send you a free telematic dongle to use for around 3 months. Once installed, the dongle will monitor your vehicle's driving speed, distances, times and parking locations. We'll provide all this data and your electric vehicle suitability assessment in a personalised report and can assist you with the first steps of your EV procurement process.

Here's how to get your personalised EV assessment:

- 1 Fill out a short EV survey or contact us via email to register your interest!
- 2 The CRP team will coordinate your vehicle monitor installation.
- 3 We'll send a monitoring device for your vehicle's OBD II port and an installation technician over for free.
- 4 The device will monitor your vehicle speed, distances, times and parking data for around 3 months.
- 5 CRP will provide your data and EV suitability assessment in a report and 1-to-1 support with your EV procurement.

For more information on your personalised EV suitability assessment, please contact CRP Project Manager Fiona Coull
