## KEY FACTS

TfL's Streetspace fund and DfT's active travel grants have provided much of the funding for more walking and cycling projects in London. More than 120 kilometres of new or upgraded cycle routes have been delivered or under construction since the start of the pandemic up to January 2022. Other measures have included hundreds of new traffic restrictions, extended pavements and junction improvements.

Only 56% of households in London own a vehicle. This statistic is considerably lower than the average for the rest of England, at 80%

Residents of Melbourne spent around 85 hours stuck in traffic during commuter times in 2019. The average person living in London spends 115 hours stuck in traffic every year.
