KEY FACTS

In the UK, air pollution causing negative health effects costs the NHS £20 billion every year and contributes to 40,000 premature deaths (The Royal College of Physicians).

40-60% of residents in large urban areas don't have access to off-street parking where they can charge their vehicles at home. On-street charge points are an essential proxy for home charging for the millions of UK residents who want to switch to EVs.

The number of packages sent in the United Kingdom has increased exponentially between 2013 and 2021. Approximately 4.2 billion parcels were sent in the 2020/2021 fiscal year. This was an increase of over 1.3 billion parcels relative to the previous year.
