CRP City Vision

Empowering you with specialised traffic and active travel evidence to support public-realm decision-making

Evidence has become critical to create healthy streets and neighbourhoods.
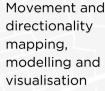

Cross River Partnership's (CRP) insightful traffic and active travel reporting can support Local Authorities, Business Improvement Districts (BIDs) and landowners with evidence of how spaces, streets and neighbourhoods are used.

We measure and analyse movement and dwelling data at various scales to create clear and insightful reports. Our findings can provide the proof of concept to create long-term sustainable change in the public realm.

CRP have partnered with <u>Vivacity Labs</u> to use their artificial intelligence sensors to provide insights and reporting into:
Active travel and traffic count analysis that measures all vehicle classes

Air quality and emissions modelling

Speed and road safety evidence

Movement and directionality mapping, modelling and visualisation

Public realm and behaviour analysis
